

PARTH TIWARI

+91 9211975266 ◇ Noida, India

[Gmail](#) ◇ [LinkedIn](#) ◇ [GitHub](#) ◇ [Portfolio](#) ◇ [LeetCode](#)

OBJECTIVE

Backend-Focused Software Engineer with strong expertise in Python, scalable backend systems, API-driven architectures, and AI-powered application development. Experienced in building distributed systems, intelligent automation workflows, RAG pipelines, and production-grade cloud deployed applications with focus on performance and scalability.

EDUCATION

Chandigarh University

2021 – 2025

Bachelor of Engineering in Computer Science

CGPA: 7.76

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C/C++

Backend Technologies: FastAPI, Flask, Node.js, Express.js, REST APIs, Microservices

Frontend Technologies: React.js, CSS, Tailwind CSS

AI & LLM Technologies: OpenAI SDK, LangChain, LangGraph, RAG Pipelines, Vector Databases, Weaviate

Databases: MySQL, MongoDB, PostgreSQL, Oracle

Cloud & DevOps: Docker, CI/CD, Git, GitHub, Google Cloud Platform, Postman

EXPERIENCE

Done Mortgage

Nov 2025 – Present

Full Stack Developer

- Developed scalable backend services using Python and FastAPI for mortgage automation systems handling borrower verification, financial document processing, and high-volume workflow orchestration.
- Built AI-powered document processing pipelines for automated classification, structured data extraction, validation workflows, and reducing manual review effort across mortgage processing systems.
- Engineered ADMS self-learning AI agent architecture with persistent learning memory, correction tracking, semantic search, and Retrieval-Augmented Generation (RAG) pipelines using pgvector for context-aware document intelligence.
- Developed intelligent chat-agent and review systems enabling grounded LLM-based document querying, confidence scoring, anomaly detection, and automated document review workflows as part of internal TemperCheck validation systems.
- Improved production scalability through microservice architecture, asynchronous background task processing, Docker-based deployments, CI/CD pipelines, and backend performance optimization for production-grade infrastructure.

Smarter.Codes

Jul 2025 – Oct 2025

Full Stack Developer

- Developed scalable backend services using Python and FastAPI for AI-driven automation platforms.
- Built REST APIs and intelligent workflows for task automation and real-time data processing.
- Contributed to microservice architecture, backend optimization, and deployment workflows.
- Participated in debugging, code reviews, and performance improvements for production systems.

RELEVANT PROJECTS

Agentic AI Research Assistant

(Python, FastAPI, LangChain, LangGraph, OpenAI SDK, Weaviate)

- Built scalable multi-agent AI system using LangGraph for intelligent task orchestration and autonomous reasoning.
- Developed RAG pipelines with vector embeddings and semantic search for context-aware information retrieval.
- Designed REST APIs and asynchronous workflows for real-time AI response streaming.
- Optimized backend architecture for scalability, modularity, and high-performance AI processing.
